Houston, Texas, August 25, 2011.....

Cooling Technology Institute (CTI) Press Release

CTI is pleased to announce that the CTI Board of Directors has approved STD-202, the Standard for Publication of Custom Cooling Tower Thermal Performance Test Results. This standard authorizes the initiation of a program in which manufacturers of larger non-series type (typically field erected) cooling towers agree to have the results of their CTI Licensed thermal performance tests published by manufacturer name when those tests are performed to determine compliance with thermal performance guarantees.

The manufacturer-specific results are published as a 3 year rolling average of the annual percentage of tests with thermal capability greater-than-or-equal to 100%, and a 3 year rolling average of the annual averages of test values below 100%.

Manufacturers are encouraged to apply now to become participants in this program per the standard. Manufacturers should obtain a copy of STD-202 (11) from the CTI office, or from www.cti.org, and apply to the CTI Administrator, per the requirements in STD-202, as soon as possible to become Participating Manufacturers. The program is anticipated to start in January 2012.
