**See Footnotes Below**

**Footnotes:**

- 1) LSWB and LRWB are prefixes used at the beginning of the model number to indicate fan configuration.
- 2) Certification includes units with optional high flow header connections for better process fluid distribution at higher flows.
- 3) Certification includes use of optional external platforms/ladders for access.
- 4) Certification includes an optional remote sump.
- 5) Certification includes use of optional water silencers.
- 6) Certification includes an optional stainless steel coil which requires a 3.5% reduction in thermal capacity (suffix C).
- 7) Certification applies only to units with water as the process fluid.
- 8) Certification includes use of a straight discharge hood.
- 9) Certification includes use of positive closure dampers.
- 10) Certification includes use of Intake attenuation which requires a 5% reduction in thermal capacity at constant horsepower (suffix I).
- 11) Certification includes use of discharge attenuation with dampers which requires a 2% reduction in thermal capacity at constant horsepower (suffix D).

- 12) Certification includes use of full sound attenuation with dampers which requires a 7% reduction in thermal capacity at constant horsepower (suffix F).
- 13) Certification includes use of a tapered hood with dampers which requires a 2% reduction in thermal capacity at constant horsepower (suffix H).
- 14) Certification includes use of intake attenuation and tapered hood with dampers which requires a 7% reduction in thermal capacity at constant horsepower (suffix HI).
- 15) Certification includes units with alternate series flow coil arrangement (suffix Z).
- 16) Units with a suffix of S on the end are not CTI certified.
